CONCERNING THE PROBLEM ON THE ELECTRON DENSITY OF SOLAR CORONA (K Voprosu ob Elektronnoy Plochnosti Solnechnoy Korony). 15 Nov 60 [3]p. 3 refs. MCL-227/1.

Order from LC or SLA mi\$1.80, ph\$1.80 61-19443

Rough draft trans. of Astronomicheskii Tsirkulyar (USSR) 1955, no. 157, p. 8-9.

The electron densities of the solar coronas for September 21, 1941 and for August 8, 1914 were recalculated according to the method of A. F. Bogorodskiy and N. A. Khinkulova (Trudy Kievskoy Astron. Observ. 4: 3, 1950) in which consideration is given to the Fraunhofer component according to Grotrian and the anisotropy of light dissipation by electrons. These values were calculated to replace values published previously (Byulleten KISO No. 5-6(19-20): 19, 1950). Inasmuch as the tables are omitted in the present translation (only the table headings are given) the reader will need to have access to a copy of the untranslated article.

Order from SLA \$1.10

61-18896

Trans. of Glesserei (West Germany) 1958, v. 45, no. 4,
p. 87-92.

DESCRIPTORS: *Steel castings, Chromium alloys,
Heat treatment, Tensile properties, Castings.

Information is reviewed on the development of new types
of steel for castings with a wall-thickness of 600mm;
composition of newly developed low carbon types of
chromium steel; strength properties, particularly
notched bar impact toughness and resistance to shock-
loading; and heat treatments.

(Metallurgy--Ferrous Metals, TT, v. 6, no. 10)
